

Accelerate your trading systems with unmatched Java performance and predictability

No-pause ultra-low latency Zing brings Java to a new level of performance by providing certainty of execution and guaranteed throughput with no surprises

Trading with Java

Electronic trading systems power today's ultra-fast, ultra-competitive markets and are the profit and loss centers for both agency and proprietary trading firms. For these firms, the demands of integrated and highly-correlated global markets require real-time trading systems capable of processing massive volumes of quote and trade data using complex algorithms designed to execute trading strategies across multiple asset classes. In order for these systems to have a bottom-line impact, they must deliver on high-throughput and ultra-low latencies while also being highly predictable, reliable and scalable. As a result, choosing the appropriate advanced technology plays a critical role and is often the difference between profits and losses.

Conventional, one-size-fits-all JVMs are unable to meet the strict performance requirements of the electronic trading world in spite of costly and time-consuming attempts at tuning. As a result, the wrong JVM choice can adversely impact a firm's ability to compete and survive.

The Zing® no-pause ultra-low latency JVM from Azul Systems establishes a new performance standard unmatched in the industry and meets or exceeds requirements for ultra-low latency electronic trading. Zing is a smart JVM that dynamically adapts to peak loads associated with tail events that can swing markets to extremes and impact the trading system's ability to perform under stress. Performance tuning is reduced to a single parameter, freeing product development to focus on implementing new trading strategies rather than on costly and frequent JVM tuning cycles that fall short of requirements. Zing is Java SE compliant, a full-featured JVM that requires no code re-compilation or special configuration.

BENEFITS OF ZING FOR TRADING

- **Provide certainty of behavior** Eliminate application pauses and latency spikes
- **Ultra-low latency** Increase throughput at far lower average latencies
- **Improve time to market for new algos** Eliminate the need for most application tuning
- **Compatible** Java SE compliant with no code re-compilation or special configuration
- **Automatically handle peak loads** Eliminate tail risk associated with memory configuration
- **Unmatched performance and scalability** Proven high performance JVM for trading

Zing is the best JVM for Trading Systems

Zing delivers unmatched ultra-low latency with predictable no-pause real-time behavior and eliminates trading system tail risk that can adversely impact the end-of-day P&L statement.

Some Azul Systems Partners in Algorithmic Trading

ULLINK products deliver a competitive advantage to traders through the most efficient trading system in terms of low latency, throughput and scalability. www.ullink.com

OptionsCity is the developer of Metro, the award-winning electronic trading and market-marking platform. Its latest product, Freeway, is a multi-asset automated trading platform designed to offer developers and traders a comprehensive environment to create, test, and deploy algorithmic trading strategies with micro-second execution. www.optionscity.com

Solarflare develops network interface software and hardware to transform the way applications use networks, providing industry-leading application acceleration for the most demanding scale-out compute environments. www.solarflare.com

Informatica provides data integration software and services that enable organizations to gain a competitive advantage in today's global information economy by empowering them with timely, relevant and trustworthy data for their top business imperatives. www.informatica.com/us

60East Technologies was founded in 2010 by world-class system programming experts. The team developed a technology called AMPS that for highly scalable real-time applications. The goal of 60East Technologies is to build the fastest real-time streaming database software so application developers deliver solutions that outperform their peers. www.crankuptheamps.com

TIBCO StreamBase, the leader in high performance Complex Event Processing (CEP), provides software for rapidly building systems that analyze and act on real-time streaming data for instantaneous decision-making. www.streambase.com

CUSTOMER SUCCESS

Trading Desk

Problem:

Trading buy and sell decisions needed to occur at the microsecond level but JVM latency slowed down response time and throughput

Solution: Azul Zing

Benefits:

- JVM latencies in the single-digit microsecond range
- Significant improvement in throughput and average latency
- Faster time to market for deployment of new trading algos
