

Azul Platform Core™

Low Cost, Secure, Superior Java Support

Azul Platform Core is about Risk Mitigation. Satisfy Corporate Compliance, Governance Requirements and SLAs.

- Guaranteed timely access to secured and updated binaries and out-of-band emergency patches - because hackers don't wait
- IP and licensing anti-contamination guarantees and indemnification - because we live in a litigious world
- Real Support 24x7x365 - because Java isn't perfect, and regressions can cause outages and customer failures
- Whatever your Java versions: 6, 7, 8, 11, 13, 15, 17 - all Azul Zulu Builds of OpenJDK are ALWAYS up to date because engineering teams need flexibility on when to move to newer releases
- Linux (all flavors), Windows, macOS, Solaris platforms supported; 32-bit and 64-bit - because organizations don't want to be tied to a single O/S
- Used by Salesforce, Mastercard, Workday, Netflix, Software AG, Avaya, SAS, and hundreds more organizations

Compare Azul Platform Core to Community Builds of Azul Zulu OpenJDK and Oracle Java SE

Features	Azul Platform Core	Zulu (Community)	Oracle Java SE
100% Open Source - no restrictions, no hassles	●	●	○
Production-quality support for Java 8, 11 and 17, older "LTS" versions Java 7 and 6, and newer versions Java 13 and 15	●	◐	◐
Patent and Non-Contamination Indemnification	●	○	◐
Dedicated Global Java Support team, 24x7x365 live Support	●	○	◐
Security-specific updates (fit for urgent deployment) and Out-of-Cycle Critical Fixes	●	○	●
Affordability of Support: Saving Fortune 2000 customers many millions of \$* and smaller customers thousands. <small>*Reference Source</small>	●	Not Applicable	○
A track record of not auditing clients:	●	Not Applicable	○

Azul Platform Core Security Key Benefits

Timely updates and security fix-dedicated releases for Critical Vulnerability Exposures: Only Azul and Oracle provide security-only "CPU" Releases.

Certified Compliance

Zulu builds are certified Java SE compliant and compatible, using 120,000+ Technology Compatibility Kit (TCK) tests, and tens of thousands of other Java quality tests developed by Azul over 19 years.

Dedicated to the Java Community for Security

Azul are active members of the OpenJDK Vulnerability Group, we're the first vendor to support TLS 1.3 standard for Java 8 and have back-ported several other key protocols.

Security for releases unsupported by others

7, 8, 11, 13, 15 and 17 as standard, 6 as Extended Support. Upgrade your Java in YOUR time.

What does Azul Support include?

Azul Zulu Builds of OpenJDK binaries are fully supported by Azul, with contractually mandated SLAs as part of the Azul Platform Core product. If you encounter a critical production issue with Zulu, you will get the support you need, right away, for as long as it takes. This includes phone support. It also means that, if necessary, we will escalate an issue and work it 24x7 until resolution. By contrast, community builds of OpenJDK are not supported, and there is no time frame for security updates.

"When we have questions, we get answers. When we need help, we get exceptional support."

Ariel Pizetsky, VP of IT
